

The diagram illustrates the control logic for a filling station. It features six input relays (I1-I6) and four output relays (Q1-Q4). The logic is organized into several functional blocks:

- Filter Control (Q1):** Activated by the enabling switch (I1) and the emergency fill (I5) via an AND gate (B001).
- Compression Valve (Q2):** Controlled by a complex logic involving the reed contact (I2), level indicator (I3), and overpressure monitor (I4). It includes a timer (B005) for 30:00s+ and a counter (B004) for 99:00s+.
- Horn (Q3):** Activated by the overpressure monitor (I4) and the acknowledge button (I6) via an AND gate (B011).
- Overpressure Indicator Lamp (Q4):** Activated by the overpressure monitor (I4) and the acknowledge button (I6) via an AND gate (B016).

The diagram uses a color-coded system: blue for enabling/normal operation, red for emergency/stop, and green for timing/delay. The logic blocks are labeled B001 through B016, and the relays are labeled I1 through I6 and Q1 through Q4.

- LOGO! 230RC
- I1 Enabling button (NO)
- I2 Reed contact on filler neck (NO)
- I3 Level indicator (NO)
- I4 Overpressure monitor (NC)
- I5 Emergency fill button (NO)
- I6 Acknowledgment switch for audible alarm (NO)
- Q1 Filter
- Q2 Compression valve
- Q3 Audible alarm
- Q4 Indicator lamp for overpressure

Block Number (Type)		Parameter
B005 (Off-Delay) :		Rem = off 30:00s+
B007 (Off-Delay) :		Rem = off 99:00s+
B010 (Off-Delay) :		Rem = off 25:00s+
B013 (On-Delay) :		Rem = off 01:00s+
I1 (Input) : Freigabeschalter Enabling switch		
I2 (Input) : Reedcontact Füllstutzen Reed contact on filler neck		
I3 (Input) : Füllstandsschalter Level indicator		
I4 (Input) : Überdruckschalter Overpressure monitor		
I5 (Input) : Not - Befüllung Emergency fill		
I6 (Input) : Quittiertaster Hupe Acknowledge button Horn		
Q1 (Output) : Filter Filter		
Q2 (Output) : Quetschventil Compression valve		
Q3 (Output) : Hupe Horn		
Q4 (Output) : Meldeleuchte Überdruck Indicator lamp for overpressure
