Berechnung Sollwert der Tages-Vorlauftemperatur:

Hier Gain + Offset aus Excel-Tabellenblatt

eintragen!

-> Referenzwert für MUX B005

Calculation of the setpoint for flow temperature during the day:

Enter Gain + Offset from Excel spreadsheet here!

-> Reference value for MUX B005

Sensor Außentemperatur (PT100)
Sensor outside temperature (PT100)

Berechnung des Sollwertes für die Vorlauftemperatur Nachts:

Sollwert der Tages-Vorlauftemperatur (B007) minus Kelvinwert bei Nachtabsenkung (B010).

Calculation of the setpoint for the flow temperature at night:

Setpoint of the daytime flow temperature (B007) minus Kelvin value at night-time reduction (B010)

Nachtabsenkung von 22:00h bis 05:30h

Night-time heating reduction from 10 p.m. to 5:30 a.m.

Wenn Schaltuhr = aus, Wert von B007 ausgeben.

Wenn Schaltuhr = ein, Wert von B002 ausgeben.

If time switch = off, give out the value of B007.
If time switch = on, give out the value of B002.

Hysterese:

Einschalten, wenn Istwert den Sollwert erreicht hat (Differenz = 0),
Ausschalten, wenn die Heizung 2,0°C abgekühlt hat (Differenz = 20)

Hysterisis:

Switch on, when process value has reached the setpoint value (difference = 0),
switch off, when the heating has cooled down about 2.0°C (difference = 20)

Sensor Vorlauftemperatur (PT100)
Sensor flow temperature (PT100)

Begrenzung der Vorlauftemperatur (mit Hysterese 5 Kelvin):

Heizung abschalten bei 80,0°C

Abkühlung bis 75,0°C

Limitation of the flow temperature (with hysteresis 5 Kelvin):

Switch off heating 80.0°C

Cool down till 75.0°C

Heizung ein/aus
Heating on/off

Deutsch:

Anforderung:

- Mit LOGO! soll eine Zweipunkt-Heizungssteuerung realisiert werden:
- * Erfassung von Außen- und Vorlauftemperatur mittels PT100 Temperatursensoren
 - * Sinkt die Außentemperatur ab, soll die Vorlauftemperatur erhöht werden und umgekehrt.
 - * Die Steuerung soll eine Nachtabsenkung der Heizung zur Energieeinsparung beinhalten.
 - * Der Kelvinwert (Temperaturdifferenz), um den in der Nacht abgesenkt wird, soll über das LOGO! TD einstellbar sein.
 - * Die Schaltzeiten für die Nachtabsenkung sollen am Display dargestellt werden, um diese dort schnell verändern zu können.
 - * Die Heizungssteuerung soll eine Hysterese beinhalten und eine Begrenzung der maximalen Vorlauftemperatur.

LOGO!-Lösung:

Heizungssteuerung, Hysterese, Begrenzung:
LOGO! vergleicht die zwei Temperaturwerte der Außen- und Vorlauftemperatur am Baustein B004.
Ist der Sollwert erreicht, schaltet die Heizung ab. Damit, wenn sich die Temperatur gerade an der Schaltschwelle befindet, nicht ständig ein- und ausgeschaltet wird, ist im Analogkomparator B004 eine Hysterese von 1K eingestellt. Die Heizung wird also beim Erreichen des Sollwertes abschalten, um 2°C abkühlen, dann wieder einschalten. Über den Analogverstärker B007 kann die Lage und Steilheit der Heizkennlinie verändert werden (Parameter siehe Excel-Datei). Ein analoger Schwellwertschalter (B009) ist dafür verantwortlich, dass bei einer Vorlauftemperatur von 80,0°C die Heizung abgeschaltet wird. Erst wenn diese auf mind. 75,0°C abgekühlt hat, arbeitet die Heizung wieder im Normalbetrieb.

Nachtabsenkung:
Nachts wird in der Zeit von 22:00 bis 05:30 Uhr die Vorlauftemperatur reduziert. Um wie viel °C die Temperatur abgesenkt wird, kann mit den F-Tasten des LOGO! TD eingestellt werden. Hierzu wird ein Vorwärts-/Rückwärtszähler (B010) verwendet, der seinen Wert Nullspannungsfest behält (Remanenz). Wird dieser Zähler beispielsweise auf 25 eingestellt, entspricht dies 2,5°C.
Damit nun im Display als Differenz nicht 2,5 Kelvin, sondern -2,5 K angezeigt werden, wird über den Multiplexer B015 per Verweisfunktion der Zählerwert in einen Analogwert gewandelt und mittels eines nachgeschalteten analogen Schwellwertschalters (B016) invertiert (* -1).
Der Wert von B016 kann nun mit einer Nachkommastelle im Display angezeigt werden.
Da also bei Tagbetrieb ein anderer Sollwert gilt als bei Nachtbetrieb, wird ein Multiplexer (B005) verwendet, um im Tagbetrieb den Sollwert von B007 und im Nachtbetrieb den Sollwert von B002 auszugeben.

Menüsteuerung mit LOGO! TD:
Es sind 3 Meldetexte im Programm integriert, die mit der F1-Taste des LOGO! TD durchgeblättert werden können.
Sie werden mit Zählern aktiviert.
Bei Meldetext B006 ist Laufschrift aktiviert und eine zweiten Ebene (2. Zeichensatz) verwendet.
Mit der Taste F4 kann zwischen 1. und 2. Ebene umgeschaltet werden (M27).
In diesem Programm wurden die Texte auf der 1. Ebene in Deutsch und auf der 2. Ebene in Englisch.

Verwendete Komponenten:

- AI3 PT100 Temperaturfühler für Vorlauftemperatur
 - AI4 PT100 Temperaturfühler für Außentemperatur
 - Q1 Heizung ein/aus
 - F1 Weiterschalten der Meldetexte
 - F2 Nachtbetrieb kälter
 - F3 Nachtbetrieb wärmer
 - F4 Sprachumschaltung
 - LOGO! 12/24RC
 - LOGO! AM2 PT100
 - externes Display LOGO! TD
 - Stromversorgung LOGO! Power 24V
- (andere Konstellationen möglich)

Vorteile und Besonderheiten:

Die Lage und Steilheit der Heizkennlinie und die Zeiten für die Nachtabsenkung können mittels des Excel-Diagramms leicht verstellt und auf die individuellen Anforderungen angepasst werden.
Komfortabler Zugriff auf alle wichtigen Parameter mit dem externen Display LOGO! TD.
Kostengünstige Lösung mit LOGO! gegenüber herkömmlichen Heizungssteuerungen.
Jederzeit mit weiteren Funktionen erweiterbar.

Parameter:

- B001: Skalierung des Temperatursensors Außentemperatur
- B003: Skalierung des Temperatursensors Vorlauftemperatur
- B007: Lage der Heizkennlinie, Sollwert der Vorlauftemperatur
- B004: Differenz zwischen Außentemp. und Vorlauftemp., Hysterese
- B009: maximale Vorlauftemperatur
- B010: Temperaturdifferenz bei Nachtabsenkung
(wird über B016 angezeigt und über B002/B005 weiterverarbeitet)
- B020: Schaltuhr

Die in diesem Programm eingegebenen Parameter müssen auf die individuellen Bedürfnisse angepasst werden!

Creator:	adbejo0		Project:	Zweipunkt-Heizungsregelung (mit Hysterese und	Customer:	SIEMENS AG

English:

Requirement:

A two-point heating control is to be realized with LOGO! :

- * The outside temperature and the flow temperature is measured by two temperature sensors (PT100)
- * If the outside temperature drops, the flow temperature is to be increased and vice versa
- * For energy conservation, the controller should reduce the temperature of the heating at night
- * The difference between the daytime temperature and the reduced temperature at night shall be adjustable via LOGO! TD (Kelvin value)
- * The switching times for the night-time heating reduction shall be displayed to be able to change them quickly
- * The heating control shall contain a hysteresis and a limitation of the maximum flow temperature

LOGO!-solution:

Heating control, hysteresis, limitation:

LOGO! compares the two temperature values of the outside- and flow temperature at function block B004. If the setpoint is reached, the heating switches off.

In the analog comparator (B004) a hysteresis of 1K is defined to avoid, that the heating switches permanently on and off if the temperature is equal to the threshold.

So the heating will switch off if the setpoint is reached, will cool down about 2°C and will then switch on again.

With help of the analog amplifier B007 the position and the slope of the heating curve can be defined (parameters see excel spreadsheet).

An analog threshold trigger (B009) is responsible to switch off the heating at a flow temperature of 80.0°C. If the heating is cooled down to at least 75.0°C, it works in normal mode again.

Night-time heating reduction:

At night between 10:00 p.m. to 05:30 a.m. the flow temperature becomes reduced. How many °C the temperature is reduced can be adjusted with the F-keys of LOGO! TD. Therefore an up-/down counter (B010) is used. It keeps its value non-volatile (retentivity).

If, for example, the counter is adjusted to a value of 25, this is equal with 2.5°C.

To be able to display the difference not as 2.5 Kelvin, but as -2.5 K, via the multiplexer B015 the counter value is converted into an analog value with help of the reference function.

With a following analog threshold trigger (B016) the counter value is inverted (* -1). Now the value of B016 can be displayed with one decimal.

Because in day-mode an other setpoint is valid as in night-mode a multiplexer (B005) is used. In day-mode it gives out the setpoint of B007 and in night-mode it gives out the setpoint of B002.

Menu control with LOGO! TD:

3 message texts are used in the circuit which can be scrolled by using the F1-key of LOGO! TD.

They are activated by counters.

In message text B006 "ticker text" is enabled and a second level (2nd character set) is used.

By using the button F4 you can switch between 1st and 2nd level (M27).

In this program the texts on the 1st level have been entered in German and on the 2nd level in English.

Components used:

- AI3 PT100 Temperature sensor for flow temperature
 - AI4 PT100 Temperature sensor for outside temperature
 - Q1 Heating on/off
 - F1 browsing the message texts
 - F2 reduce temperatur (for night-time reduction)
 - F3 raise temperature (for night-time reduction)
 - F4 Language switching
 - LOGO! 12/24RC
 - LOGO! AM2 PT100
 - external display LOGO! TD
 - Power supply LOGO! Power 24V
- (other constellations are possible)

Advantages and Specialties:

The position and slope of the heating curve and the switching times for night-time heating reduction can easily modified and adapted to the individual requirements by the Excel spreadsheet

Comfortable access to all important parameters with help of thhe external display LOGO! TD.

Low-cost solution with LOGO! opposite to conventional heating controls.

Can be expanded with further functions at any time.

Parameters:

B001: Scaling of the temperature for outside temperature
B003: Scaling of the temperature for flow temperature
B007: Position of the heating curve, setpoint for flow temperature
B004: Difference between outside and flow temperature, hysteresis
B009: maximum flow temperature
B010: Temperature difference during night-time reduction (displayed via B016 and processed via B002/B005)
B020: Time switch

The parameters entered in this program must be adapted to you individual requirements!
